Symantec Endpoint Security Solutions Overview

Why is Endpoint Security Important?

Endpoint security is moving quickly beyond malware:

- 33% increase in mobile ransomware
- 600% increase in IoT attacks
- 80% Increase in iOS and Android vulnerabilities
- 56% Increase in risky Wi-Fi networks
- 54% increase in mobile malware variants
- 70+ million records stolen or leaked due to poor AWS configuration

Get the industry-leading endpoint security solution to help protect your business.

Endpoints are a primary target of cyber attackers. Symantec Endpoint Security prevents, hardens, detects, and responds to emerging threats across laptops, desktops, tablets, mobile phones, servers, and cloud workloads.

Key Capabilities

The Most Comprehensive Protection
Symantec's Industry-leading endpoint solutions secure all endpoints, including laptops, desktops, iOS phone and tablets, Android phones and tablets, servers, storage human-machine interface and operational technology, cloud workloads, containers, and cloud storage.

Cloud and Hybrid Options
While on-premises solutions remain the primary defense mechanisms for many organizations' data centers, the disappearance of the traditional network security perimeter, the need for cost reduction, and support for mobile and remote users has driven the need to move to security in the cloud. By offering endpoint solutions in the cloud, Symantec offers options for any deployment, on-premises, cloud, or a hybrid solution of both.

A Single Agent
Ponemon Institute found organizations install, on average, seven different endpoint agents to support IT management and security. Each agent operates independently with its own console and set of rules and policies—all of which need to be configured, rolled out, managed, and maintained. In addition to creating more IT overhead and costs, multiple products introduce defense gaps and errors, increasing the chances you'll miss a threat.

Symantec Endpoint Security deploys a single agent for protection, Endpoint Detection and Response (EDR), and Application Control & Isolation.

A Single Console
Symantec Endpoint Security allows an administrator to deploy and manage all endpoints through a single console with real-time threat visibility across laptops, desktops, mobile devices, servers, and cloud workloads.

The Only Solution with Integrated Breakthrough Security Technologies
Symantec Endpoint Security is the only solution with full Endpoint Detect and Response (EDR), Breach Prevention, App Isolation, and App Control capabilities integrated with Endpoint Protection.

Autonomous Security Management

Symantec Endpoint Security delivers autonomous security management that learns from admins, organization or community to continuously assess and strengthen your security posture. It also leverages Artificial intelligence (AI) guided management for establishing strong security policies with fewer misconfigurations to help improve overall security hygiene and posture.

Real-Time Threat Information

Symantec Endpoint Security leverages real-time threat information, threat analytics, content classification, and comprehensive threat blocking data from the Symantec Global Intelligence Network.

Extensible and Integrated

Symantec Endpoint Security allows you to integrate third party applications like Microsoft Graph, Open C2, and other Symantec solutions through Symantec ICDx, an open API.

Easy Endpoint Security Management

Symantec's Endpoint Security portfolio includes tools that help you manage your endpoint security deployments and workflows.

The Most Award-Winning Solution on the Market

Symantec's Endpoint Security Portfolio continues to get rave reviews and multiple awards for industry leadership, performance, efficacy.

"After implementing Symantec Endpoint Security, we achieved some stunning results. We have seen a 60 percent drop in malware events."

– Vicki Gavin, Compliance Director | The Economist

"We feel Symantec Endpoint Security provides an effective and business-friendly approach that within hours of deploying, was able to identify a threat that would have previously gone undetected."
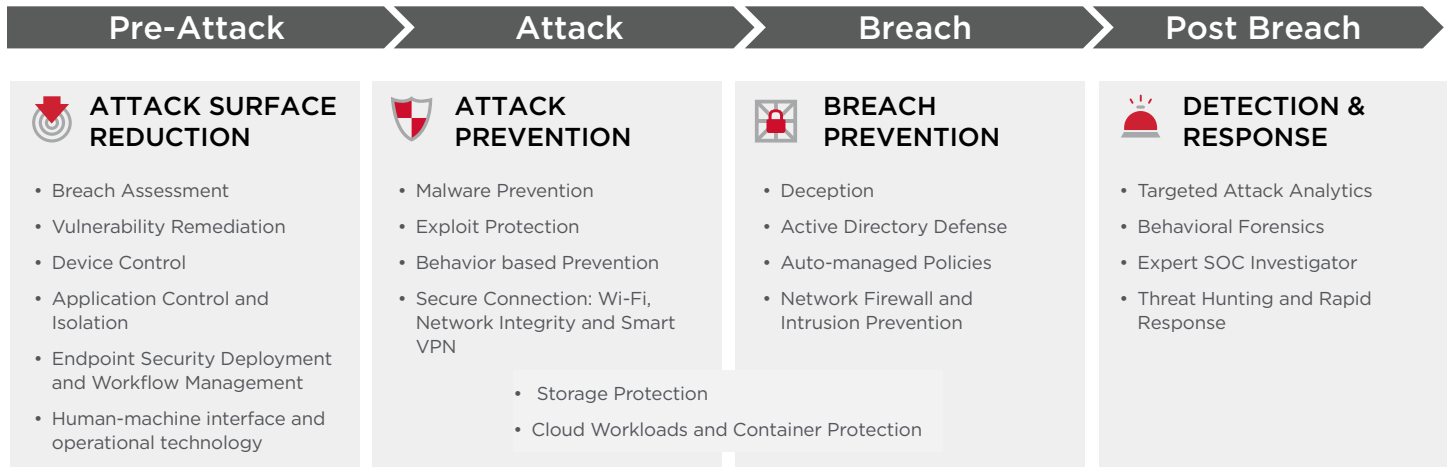

– Brian Jacome, Senior Product Manager | ROYAL BANK OF CANADA

Awards

- Radicati APT Market Quadrant Top Player 2019

- Radicati Endpoint Security Market Quadrant Top Player 2018

- Leader Forrester Wave Endpoint Security Suites 2019

- 2018 Endpoint Security Vendor of the Year

- SEP Mobile leader in IDC MarketScape: WW Mobile Threat Management Security Software 2018 Vendor Assessment

- AV-Test Best Protection Winner (four times consecutively)

- 2019 Best Enterprise Endpoint; Highest AAA ranking for past 25 consecutive quarters

- SC Magazine Recommended "We love this product." Award

- CRN's Product of the Year

- Cloud Workload Protection Suite

A Look at the Portfolio

Symantec's Endpoint Security Portfolio helps you prevent, harden, detect, and respond to emerging threats across laptops, desktops, tablets, mobile phones, servers, and cloud workloads. It protects your business across the entire attack chain.

Pre-Attack	Attack	Breach	Post Breach

ATTACK SURFACE REDUCTION

- Breach Assessment
- Vulnerability Remediation
- Device Control
- Application Control and Isolation
- Endpoint Security Deployment and Workflow Management
- Human-machine interface and operational technology

ATTACK PREVENTION

- Malware Prevention
- Exploit Protection
- Behavior based Prevention
- Secure Connection: Wi-Fi, Network Integrity and Smart VPN

BREACH PREVENTION

- Deception
- Active Directory Defense
- Auto-managed Policies
- Network Firewall and Intrusion Prevention

DETECTION & RESPONSE

- Targeted Attack Analytics
- Behavioral Forensics
- Expert SOC Investigator
- Threat Hunting and Rapid Response

- Storage Protection
- Cloud Workloads and Container Protection
